# Individual report assignment 02 - Sebastian Cavada

## Implementation contribution

The code for task number 2 was implemented by me especially for the first point of the exercise. The general code for printing and analysing all the images also was written by me.

That took also quite a bit of work in refactoring and making the code clean and clear.

I peer reviewed the code for task 2.2 code in order to spot bugs and create a more clean and robust code. Therefore I read and checked the code for task number 2.2 and 2.3.

The last contribution was coding the part for analysing the different threshold values and also do some further testing on different images.

## Report contribution

For the report I written the relative part of the code that I have written (appendix B), namely task 2.1. Moreover I helped in structuring the document and finalising the document.
